

The **STRIP** for sports performance
and good health for the mind and body

The STRIP for sports performance and good health for the mind and body.

“ ***There’s only one
medicine...*** ”

***...there are no alternative medicines, it’s a
motorway that goes in one direction only...***

***...we are just opening a third lane, in the light of
new knowledge and technological discoveries***

***...if years ago an ordinary course of medical studies
had taught that by jabbing a needle into an exact
point we would have been able to stimulate the
body and its functions, the idea would have been
considered crazy... ...nowadays acupuncture is an
item normally included in the Italian Health Service
list of charges...***

***...An energy imbalance can trigger a pathology over
time... ...but when there is a pathology energy
imbalance is already there.***

P. Spaggiari

Today F7 Technology is covered by several patents and recognised as a class 1 medical device.

BRIEF HISTORY

In the 1970s professor **P. Nogier**, considered the father of Auricular Reflexology, and Dr. **René J. Bourdiol**, neurophysiologist, demonstrated that ***“all somatic tissues, be they normal or pathological, respond to a specific luminous frequency that conditions their biological reactions”***.

Thanks to these intuitions, and by uniting the well-known properties of L.I.R. (Long Infrared Rays), about ten years ago therapist **F. Forner** created the first energy-therapy device, known as **“Device F7®”**. This patent explores and interacts with the biophysical and energetic aspects of the body, where:

- **F**

stands for **FREQUENCY**

- **7**

Refers to the **NUMBER OF THERAPEUTIC FREQUENCIES** identified by prof. P. Nogier and Dr. René J. Bourdiol during their studies

LONG INFRARED RAYS AND (bio)FREQUENCIES AT THE SERVICE OF WELLBEING

OmStrip-F7 technology **Patented, tested, measured.**

This technology unites the properties of long infrared rays (LIR) with the precise **BIOSTIMULATING FREQUENCIES** described above, through an innovative process.

There are two distinct lines, **SPORT** and **THERAPY**.

Easily applied, it acts **SYSTEMICALLY**, providing greater benefit in the application zone.

In contact with the body, it is activated by interacting bio-compatibly and naturally with the network of ultraweak impulses used by the body to communicate with itself.

It produces a cascade of beneficial effects that optimise its functions, particularly skeletal muscle performance.

LIR TECHNOLOGY AND 7 FREQUENCIES

F7 technology develops by means of a patented treatment comprising a mix of well-balanced noble metals irradiated with the special frequencies suitable for **sport**, i.e. for performance and therapy.

This technology can

- improve the physical performance and wellbeing of humans and animals
- limit the effects of emissions of electromagnetic waves from devices in general, but particularly cell and cordless phones
- enhance the organoleptic qualities of food

7 FREQUENCIES

*The studies carried out by Nogier and Bourdiol have distinguished **7 frequencies** listed in a table, starting with a base value close to 2.5 Hertz, and marked alphabetically.*

1. **A** is indicated for everything of an allergic nature, involving both skin and mucose, and for scars
2. **B** for local inflammation, arthrosis, vascular disorders and rheumatic symptoms
3. **C** for muscular performance and pains
4. **D** for strictly median and symmetrical pains
5. **E** for neuralgia caused by peripheral radiculopathy
6. **F** for anything neurovegetative and subcortical
7. **G** in the case of intense pain and for problems of a conscious or psycho-affective nature

OMSTRIP SPORT PERFORMANCE

Indicated for optimising performance and managing recovery systemically, especially at application points.

- Improves the balance, control and precision of athletic gesture or sports performance.
- Improves management of workloads during effort.
- Helps early recovery from fatigue, also through more effective sleep.
- Speeds up muscle recovery processes, also through better control of lactic acid accumulation.
- Enhances oxygen supply to the tissues.
- Greatly improves muscle performance.

OMSTRIP THERAPY

Indicated for all muscle and joint pains caused by arthrosis, overloading and peripheral neuralgia.

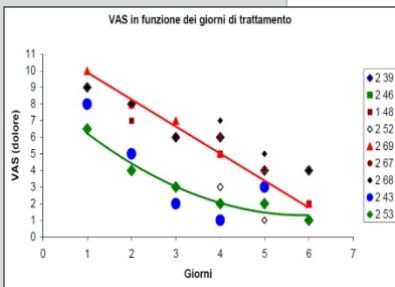

Helps:

- reduce neuropathic and inflammatory pain
- improve muscle movements and flexibility
- recover from overloading and muscle pain

Results:

A statistical analysis has been carried out that correlates the curve of the VAS scale figures with days of treatment, i.e. from the first day to the last.

The photo shows groups of cases that underwent treatment for at least six days.

The graph clearly shows two statistically significant trends regarding reduction of perceived pain.

TESTS AND MEASUREMENTS

Measurements that have been taken over the years according to a scientific protocol and statistically analysed include:

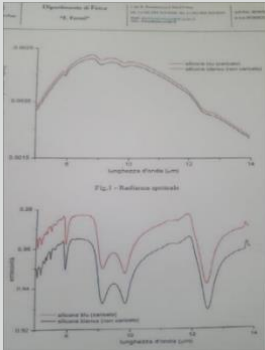

- electromyography
- radiogoniometry
- lactate analysis
- posture and balance analysis
- muscle performance analysis

Some of the more important tests include:

- Tests and measurements by Prof. R. Pozzo, lecturer in Biomechanics of Movement at **Udine University** and consultant to Italian Winter Sport Federation (**FISI**)
- **Pisa University** Department of Materials Physics, where a spectral radiance biocompatible with that of body tissues was seen
- Master thesis in Optics '**The Effect of F7 Technology on Visual Function**'
- **Zae Bavarian Center for Applied Energy Research**

PISA UNIVERSITY

(abstract of report)

...for each of the two specimens measured over three different days to check whether the event could be reproduced, an increase was seen in the emission of the one charged (informed) by said F7 technology compared to the neutral specimen involved...

... in conclusion, the results of the measurements show greater emissivity in the spectral region involved...

... in the emission spectrum of the human body ...

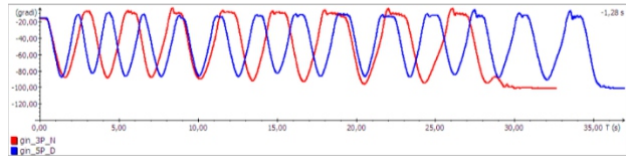

Prof. Tonelli Mauro

This project has brought to light significant properties of F7® Technology regarding the positive effects it can develop when interacting with the human body.

The tests performed are repeatable, as they were rigorously scientific, using masterised analysis protocols, almost completely eliminating nuisance variables.

OMSTRIP TECHNOLOGY CONCLUSIONS

Radiogoniometry analysis of a press exercise

- F7 has significant effects on the activation of voluntary skeletal muscles under intense, prolonged effort.
- As the test subjects did not know when the device was being used, a possible **placebo** effect can be **excluded**.
- Diminished muscle activation associated with an increase in the number of repetitions achieved using the F7 device indicates an **increase in performance** regarding voluntary muscle activation of up to 20-25%
 - The subjective responses relating to the sensation of fatigue (local and central) support the experimental data.

In this case, the onset of fatigue was reduced by up to 38%.

Prof. R. Pozzo

Electromyography

Tests performed also on top level athletes that show an increase in muscle performance, excluding the placebo effect from the start.
